It is important to periodically check for updates, as they are published at different intervals. To make things easier, your Samsung PC allows you to quickly check and apply updates. You can even customize the update settings to happen only at times that suit you. Note: Available screenshots and settings may vary depending on the software version and model. Note: Samsung Update is not available on Galaxy Book S. To update this device, use Windows Update instead. Samsung Update is usually pre-installed on Samsung PCs, but you can download it from the Microsoft Store if you don't see it. Samsung Update allows you to download updates and drivers for your Samsung software. Select Start and scroll and choose Samsung Update. Enter your PC's model number in the upper-right corner, and then select the appropriate software version. Select the drivers or installation files you want, and Click Download. The updates are installed automatically. If you're not sure about your PC's model number, click How to find the name of your device model, and then follow the instructions. You don't have to fire up your browser to check for updates; you can search for them directly from the Start menu. Windows Update also checks for driver updates. Click the Start icon, and then click Settings. Click Update & Security, and then click Check for Updates. If Windows finds updates, they are automatically downloaded and installed. There are other updating options available in this menu. For example, if you don't want to perform an update right now, you can pause updates for 7 days. Here are the other update options available: 7-day pause updates: Prevent updates from being installed automatically for a week. Change active hours: Set the time you use your PC so it doesn't restart automatically. You can even automatically adjust the active hours based on your activity. See update history: See what updates were made and when. Here you can uninstall updates and also access restore mode. Advanced settings: Receive updates for other Microsoft products, edit restart settings, and more. Sometimes updates happen at an inopitve time. If necessary, you can uninstall a recent update to get things to go back to the way they were. Click the Start icon, and then click Settings. Click Update & Security, and then click View Update History. Click Remove Updates, and then right-click the update you want. Click Remove, and then click Yes to confirm. Wait for the update to be removed; during this process, the PC can restart. Device driver updates can be done via either Samsung Update or Windows Update. Windows Update may mark these updates as optional. These drivers are needed to run system apps and connect devices. Depending on which device you're connecting to, you can get drivers for Samsung devices from our Download Center. If drivers are not available for the device, the drivers available from Samsung Update and Windows Update are sufficient. Non-Samsung devices or components may offer drivers directly from their website. For information about how to install and update drivers, see Microsoft's Help Article. Although you can update Samsung apps using Samsung Update, open the Microsoft Store (open the Start menu and write shop, and then click the Microsoft Store to open it). If some apps are already available for updating in the top right, you may see a download icon and the number of apps waiting to download. Otherwise, click the three dots, and then downloads and updates. When you're here, you can use the Download button to check all your apps for updates and the Update All button to download all updates already registered as available. Or you can pick and choose which ones to download. Finally, you can click the three dots again and select Settings to enable the setting to update apps automatically automatically must be switched on by default). If the Microsoft Store app itself is one of the apps that are updated, the store will close when the update is performed. If this happens, reopen the Microsoft Store app and check for updates again. It's also good to check for app updates after updating to a new version of Windows 10 from Windows Update. It is also possible to install desktop apps that are not in the Microsoft Store. These apps are completely maintained by their developers, and you should use any update tools that the app offers, or check with the app developer's website for information about when and how to update it. If you no longer need an app and want to uninstall it, see our guide. Thank you for your feedback! © 2020 Samsung Electronics America, Inc.
